We are just one call away from 25 Cr citizens of UP

PRAN

STAY HEALTHY | SAFE

REAL TIME LIFE SAVING MECHANISM

Powered By PRANDHARIN TRUST

The Basic Concept of the Project.

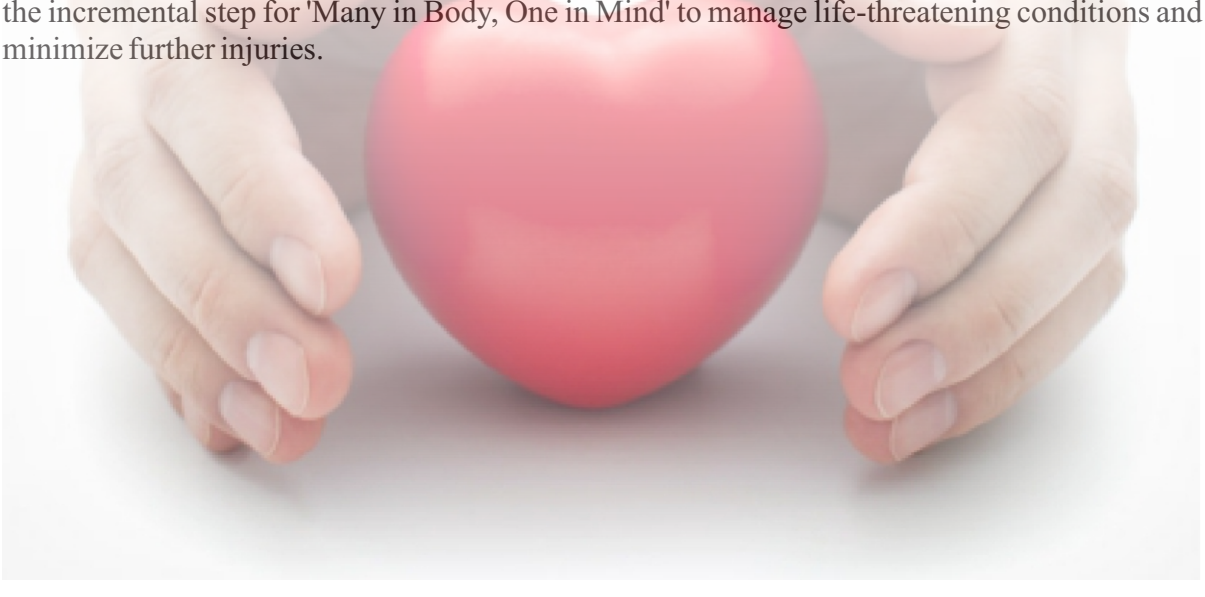

We want to bring this in the notice that in India approximately more than 70 Million death happens just because of the delay of the treatment. There are several reasons behind that. In India, we are fighting to provide the best out of the best services to the patient by providing the best medical facility. Even after that death ration is a very high and in an alarming situation. Reason for the delay is the same across the country whether it is a metro city or two-tier city or rural area.

In India, hospitals are getting enriched every day by the best and latest medical technology, they may be from the private sectors or from the government sectors. But the missing part of the medical industry is the HEALTH INFORMATION TECHNOLOGY. Every individual organisation is putting their effort to make it possible for the public but at a single platform all medical chapter's communication is not available and it is very tough to manage by the patient about every medical chapter available and different organisation. Maximum private organisation is profit-oriented and government organisation they are almost nil in the HEALTH INFORMATION TECHNOLOGY with different medical chapters.

There are several examples of unavailability or delay of the Ambulances, Blood Unites, ICU beds. Reaching time to the Hospitals, Diagnostics instruments availability and working condition of them, an extension of the legal services to accident cases are the main causes for the delay in the treatment. Certainly, we all are required to work upon the health information technology which covers the every and each segment of the medical chapters.

In these days in society, there are a lot of changes are coming that we can observe. Old parents are staying alone, students are studying outside and staying away from their parents. every single person is moving out from the city for the reason of business, service or for some social causes. Housewives are staying at home with all risk in the absence of any attendant. So this issue is related to every citizen of India. It is high time to make available a single platform to any citizen without bounding of the state and city which cover his medical risk. This need is absolutely not limited to any city, as the medical need may come to anyone and anywhere.

We, the **"Prandharin trust"** are delighted to propose a vision of **"PRAN"** for wellness and communal connectedness with the instinct of social assistance. The concept of **"PRAN"** is the incremental step for 'Many in Body, One in Mind' to manage life-threatening conditions and minimize further injuries.

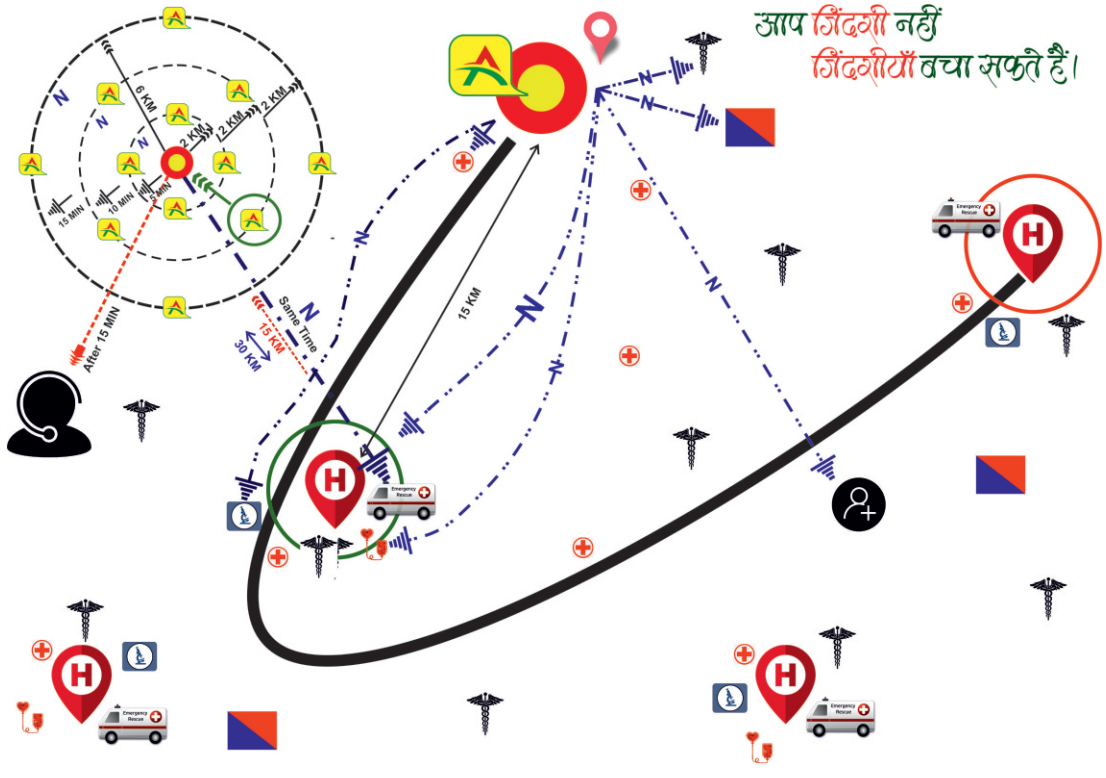

It is the outcome of engineering in between social instinct of any human being, and today's available technology. We tried to generate a channelized system, in between available recourses in medical industries as life-saving instruments and tried to develop such a system which will bring an absolute belongingness in between patient (VICTIM) and HUMAN BEING who is having a bit of social instinct. It will also increase communal harmony, which is fundamental need of any smart city.

In medical history, it will be the first time ever when in a city, if any person sick and need of life saving support, than his/her nearby hospital, Nearest Doctor, Nearest SHO, Nearest blood bank, Nearest diagnostic laboratory, nearest medical shop, and Nearest AMBUTTER (A human being who is ready to serve the society willingly), along with one nominated relative of patient (VICTIM), will get the real-time notification, to provide the life support. This will drastically reduce a time to reach the life support to any patient (VICTIM) with the support of GPS integration. The even complete medical report can be forward to the Hospital, doctor, and all relevant agencies.

This support will also be extended by the health kiosk. Health Kiosk ***"PRAN"*** *support will be available at far most village to serve the state for real time life saving mechanism. This kiosk will also available at every bus stop and railway station, densely populated area in city, Toll plaza, shopping malls, education segments along with the recommenced area from the local administration , municipal corporation, District Medical and Health Officer.*

We would like to penetrate very fast in the state as after CORONA pandemic lots of social and financial dynamics is changed. Family need and health emergency was defined in new way.

About Us

"PRANDHARIN TRUST" is working towards the very innovative and on very unique projects across India which includes the countries major current issues which have not been covered till today. It is very challenging for us to reach every citizen of the country and that is next to impossible without extended hands of yours.

Working area

"PRANDHARIN TRUST" currently working on the Five major issues across India.

1. **"Coviserv"** – An effort for COVID-19 affected families. Disaster management to rebuilding the family where earning member died due to COVID – 19 or by its symptoms. *The **"COVISERV"** has come up with solution to the families who lost some one's life who was the only earning member in their family. **Anjali** is one of the part of this Project.*

2. **"E- KISSAN"** – Financial strengthening of the farmers by integrating all agro-industries on one platform. It is a matter of concern that after the various schemes by the Central and State Governments throughout the year, various incidents of natural calamities in which due to hailstorm, heavy rain, typhoon, drought, flood etc. due to uneven yield in the country, many types of economic inequalities is being generated in the whole of the country between farmers.

   This will be the beginning of **"Digital Green Revolution"** in the agriculture sector in India, in which in the event of loss, normal or higher yield to the farmers, the farmers belonging to the agro industry, including each farmer, will get a permanent solution. Which will be able to enrich each connected person financially. Their dependence will be lower on any other aptly qualified plans.

3. **"PRAN"** – Real-time life-saving mechanism by integrating all of the medical chapters on single platform. In India approximately more than 70 Million death happens just because of the delay of the treatment. There are several reasons behind that. In India, we are fighting to provide the best out of the best services to the patient by providing the best medical facility. Even after that death ration is a very high and in an alarming situation. Reason for the delay is the same across the country whether it is a metro city or two-tier city or rural area. It is the outcome of engineering in between social instinct of any human being, and today's available technology.

4. **"My Child"** – Anti-Human trafficking measurements by integrating all possible technology on one platform. Human trafficking is one of the major problems in India. Kids especially the girl and young women, mostly from Northeast are taken from their homes and sold in faraway states of India for sexual exploitation and to work as bonded labour by the agents who lure their parents with education, better life, and money for these kids. Developed platform is heaving very important vital role for every Indian citizen. The portal is perceived that every citizen of the India is a child of the nation and that is Great INDIA. This portal is developed with the basic perception of the prevention of the HUMAN TRAFFICKING.

5. **"JEEVAN"** – Extension of technical support to local vendors of every segment for promoting local for the vocal. This project is designed by the **"PRANDHARIN TRUST"** for providing strengthening technological support for or selling purchase within the customer and wholesaler and retailer during the period of the corona, COVID -19.

आप जिंदगी नहीं
जिंदगीयाँ बचा सकते हैं।

Treatment Delayed Is Treatment Denied

Strategic Approach for implementation:

All available chapters for the medical treatment to any city will be touched by us. For bringing medical chapters we are approaching all available Hospitals with their specialisation, Doctors with their specialisation, Diagnostic Labs with the specifications of the available test, Blood banks, Medical shops and ambulances.

As we are not limited to private or government organisation as a non-profit organisation, we are approaching the responsible authorities for the government organisation. We are making it possible that all the available resources of the medical chapters should come on a single platform, which will increase the number of the available resources and this will be helpful for maximum utilisation of the resources for any life-saving in Real-time.

Extending the better medical services to the state and city is the basic moral responsibility of the any state government. We are extending our support to the Medical chapters with the basic zest of reducing delay time of treatment and extending the real-time life support. It will increase the performance of any government for medical support enhancement to the state residents.

In the second phase of the Real-time life-saving mechanism, we will extend the medical kiosk services with the approved facility at the public places as well as the rural area.

PRANDHARIN TRUST is going to open health Kiosks at different levels of the state which includes

1. All the bus stops of the state,
2. Railway stations rural and urban areas,
3. At the District collectorate premises,
4. At the SDM headquarters
5. At the block levels.
6. All the villages
7. All the toll areas,
8. Densely populated areas,
9. local city bus stops,
10. universities,
11. colleges and
12. schools
13. Shopping malls.
14. Police lines
15. Parks area with Big locality /society /colonies
16. Any spot recommended by District health Officers and District magistrate

This Kiosk is going to support in great way for extending Real Time life saving Mechanism. As these Kiosk will be available in every corner of the city. and we will try to make it available to every citizen without any categorizsation.

Every chapter of health services who is associate by any means of the HEALTH BUSINESS is required to be register on this platform.

"PRAN" Portal and Mobile Application:

The developed platform is having a very important vital role for every Indian citizen. The portal is perceived that every citizen of India is important for the nation. This portal is developed with the basic perception of the Real-time life-saving support by the help of synchronised channelization of the medical chapters for the maximisation of the resources in number and maximum utilisation of the medical chapters for any citizen of India without limiting to geography. The portal has extended some value-added services to all the medical chapters.

"PRAN"

Special features of the Portal:

1. Not limited to state as we are working **PAN INDIA**, so any states citizen goes out of the city or any state, the citizen will be covered under this platform.
2. Up to a certain level, we are trying to cover some of the **Financial liability** in emergency cases.
3. All service is based on the social obligation of the individual as well as the **all Medical chapters** are also basically associated with this mind-frame that they are working for the Society.
4. All government and private Hospital are available to extend the treatment services to the patients. As they are getting the real-time notification. Notification will be sent to the related hospital. We applied the **filtered notification** to the hospitals as per the expertise of the hospitals. Like Kidney, Heart, neuro, asthma, etc.
5. Very importantly, the availability of the ICU bed will be informed to the patient by identifying the problem and based on that filtered hospital.
6. All government and private **Doctors** are available to extend the treatment services to the patients. As they are getting the real-time notification.
7. All government and private **Medical shop** are available to extend the treatment services to the patients. As they are getting the real-time notification. The nearest medical shop will get the notification so they may deliver the medicine in lesser time.
8. All government and private **Ambulance** are available to extend the transport services to the patients. As they are getting the real-time notification. This will increase the availability of the ambulance in the city and they will be integrated under one roof.
9. All government and private **Blood banks** are available to extend the services to the patients as well as to the hospitals. As they are getting the real-time notification. Availability of the blood can be monitored by the particular Bold group and units.
10. For the security reasons and in the accident case **Police** will also get the notification in real-time and they will be extending the support by the all GPS information. It will improve the legal situational condition. Police can trace a patient location for fast reach to the hospital or at the location of the patient.

11. City police will be able to see the live location of the patient/ambulance/ attended in real-time on their dedicated portal for all the security measurements.
12. In the case of the single patient, one of the **nominated person** will be notified by notification in real-time, so nominee can follow-up the situation.
13. All related medical chapters are on **one platform** and it will improve the condition of medical services.
14. Every segment is having its **own platform** with full utility in the normal course and in an emergency condition.
15. Every user having both platforms and that is through **desktop/laptop or mobile**.
16. All the services through medial kiosk by placing the **Kiosk** at public places is integrated.
17. Every **kiosk will have trained technical operator**, and able to extend the situational medical services on an immediate basis. Along with this through kiosk some basic medical services like BP check, blood group, first aid, some SOS medicine, some AIDS control measurement can be extended, mask, portable oxygen cylinder can be extended with the mechanism of real-time lifesaving mechanism.
18. From the kiosk, Teleconferencing facility is integrated.
19. Services not limited by Geography. Services for any **urban and any rural area** can be extended with the developed mechanism.
20. Each and every segment is having their own and extended facility as per the nature of the services, as well as every single unit of each segment will have its own dedicated website with their own specifications.
21. **USP** of the state Government that they are empowered with the real tile life-saving mechanism. Every citizen is under the umbrella of PRAN, with the integrated and synchronised portal.
22. We able to develop to use the **maximum utilisation** of the resources of the available reassures of the medical chapters for real-time lifesaving mechanism.
23. Improving **"health information technology"** (HIT) (i.e., electronic health records (EHR), scheduling systems, call back systems, improved care transitions) to ensure accurate and timely communication of patient information
24. Promoting **provider-to-provider** communication
25. Implementing a standardized communications method, such as **SBAR** (Situation Background Assessment Recommendation)
26. Increasing patient and family **engagement/activation**: As organizations become more reliable, they also become more sensitive to their operations.
27. Finally Avoiding **cognitive** shortcuts (i.e., "better thinking").

How it works?

Patient:

The moment when any sick person asks for support through this app, he will get instant support from ambutter which will help to reduce the time to reach the hospital. In same way nearest ambulance will also get notification. Along with that patient is heaving the facility to search best hospital, Doctor, Nearest blood bank, Nearest diagnostic laboratory and nearest medical shop, with contact details. It will extend a great supportive help to any patient. He can get the excess of all supportive agencies at his bed. In regular term of treatment, with the help of this app, he can get all support at his doorstep.

The patient will able to search hospital detail in hospital panel. He can book an appointment with hospitals, in the emergency, he can forward the medical report for getting consultancy, further treatment support. Patients can get the current status of availability of beds in ICU, this will help to find the real-time availability of beds in hospitals, and it will reduce patients to get start treatment. Patients will also get the information that what type of tests are available, working medical equipment, and much more real-time assistance which is directly related to the real time life-saving system.

The patient could able to search near by doctors address which will be a great help to any patient for extending real-time support. Very interesting part of this application that in day time maximum doctors are located centrally, and that is hospital, defiantly that is very important part of the role of the doctors in their duty, but in off-duty hours all the doctors are time maximum doctors are located centrally, and that is hospital, defiantly that is very important part of the role of the doctors in their duty, but in off-duty hours all the doctors are scattered in the city vary widely, and they cover almost all the city but that time very less person knows the residence address or near by Doctors available for their lives BUT with the help of this application we channelised the doctors availability and interested doctors in registered categories will get the notification for MAKING AVAILABILITY OF THE DOCTORS IN REAL TIME. Lots of other facilities are therein doctors panel, that is what can avail just after registration.

The patient will able to search laboratory test detail in Diagnostic laboratory panel. The diagnostic laboratory will get the notification after the use of this app. This facility will extend to the blood bank and medical shops. So by the help of patient will able to get the real-time blood availability as well as he can get the medicinal support in real time this will be a great extension support for saving the life to the patient this is the only channelised system which we have brought in the interest of the public in mass.

In normal course patient can excess all the platform as per the need, patient can book an appointment as well as patient can order medicines from the nearest shop for fast delivery at door steps.

Hospitals:

It is very important part of this application where the registered hospital will get the real-time notification of any sick person who is using this application. It matters a lot if any hospital gets the advance notification of coming patient, it will help to start treatment on the immediate basis, and the patient will get the importance of every second what he is having. Hospital will get the full tracking view of the patient while coming to the destination. In the very critical position hospital can reach the patient's destination as we know the life is very important. With all these information hospitals can give any available facility to the patient for saving the life.

Very importantly it is the new and challenging aspect to convey the information about the available ICU bed's availability in real time, Doctors availability, Diagnostic tests availability, blood and all required medical instrument for life-saving in real time.

The associate hospital will have great "UNIQUE SELLING PROPOSITION" that they can extend the real-time life-saving assistance to all associated persons in the "CITY".

Special features for Hospitals:

1. Dedicated portal for every hospital.
2. Details of the specification of the hospitals.
3. Real-time notification about the patient.
4. Real-time medical report forwarding facility to the hospitals.
5. Hospitals can call the patient if they can able to cater to the patient.
6. If the hospital is not having the facility of related problem then they can redirect to next nearby hospital.
7. Hospitals real-time ICU and BLOOD availability will be very helpful for the patient to know and to decide where the patient is required to go for life.
8. Online preparation of the medical report of the patient and update for ready recurrence.
9. With the support of real-time notification:
    a. The hospital can take the pre-preparation measurement for the patient.
    b. A detailed report about the patient.
    c. The hospital will have information about the nearby operational equipment for diagnostics.
    d. Hospitals will have information about the blood banks and available unite in a single platform.
    e. Hospitals can extend the supply of the medicine at the doorsteps or at the hospital bed of the patient in real-time.
    f. Hospitals can have extended their own diagnostic status with this platform.
    g. The hospital will be aware that how many surrounding diagnostic instruments are available so in any critical situation they can have the services of them as well as to the patient.
    h. Tracking of the patient in the hospital is integrated, which is very important in the segment of child-trafficking which was supported by bar code, QR code, DNA, and face reading, RFID cards etc facility.
10. In normal course OPD booking facility
11. Consultancy booking
12. In any accident case, police will also get the notification in real-time and the hospital can get the services of the legal and police support in real-time and hospital can start the medical treatment in real-time.
13. Hospitals can maintain their whole stock entry into the portal. It will support to stop the leakage of the medical items.
14. Importantly all the details are recorded on the server which will defiantly help in lots of means to the government to reduce the death ratio due to delay for the treatment.

Doctors:

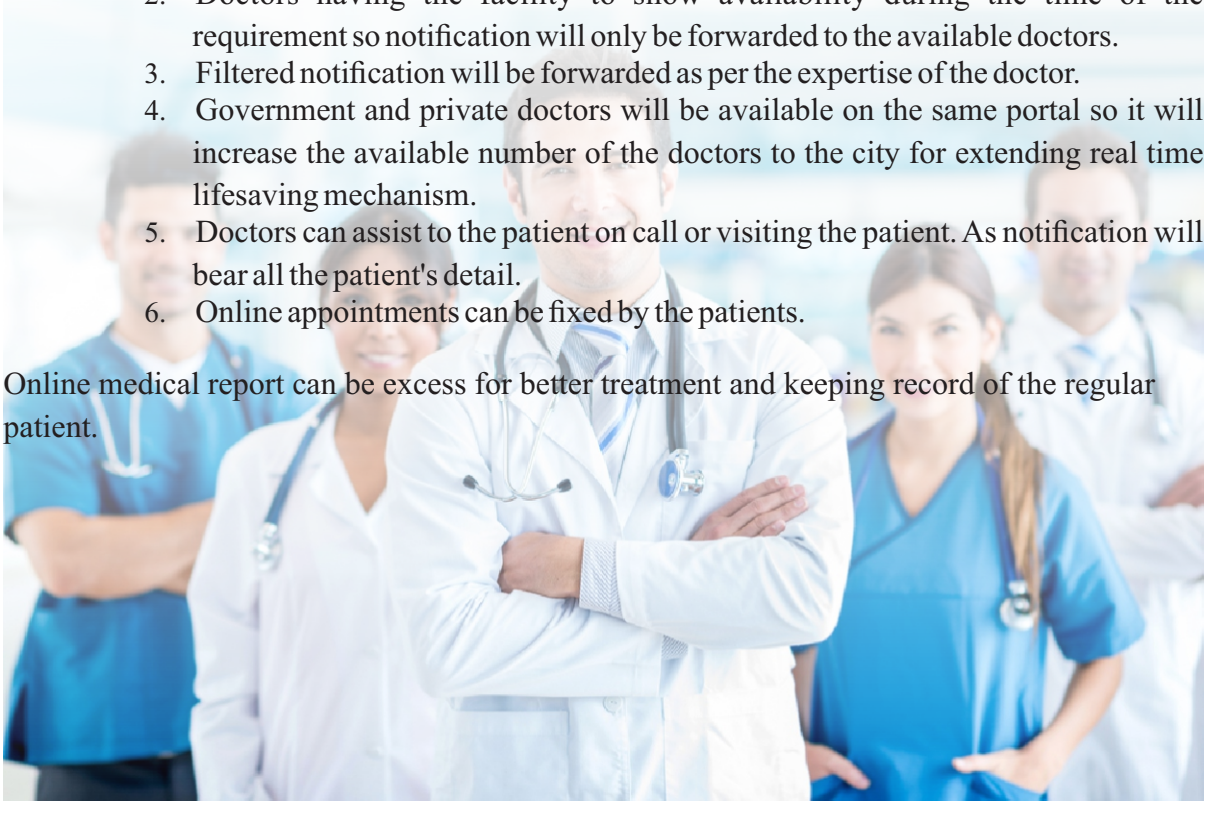

It is very important part of this application where the registered doctors will get the real-time notification of any sick person who is using this application. It matters a lot if any doctors get the advance notification of coming patient, it will help to start treatment on the immediate basis, and the patient will get the importance of every second what he is having. Doctors will get the full tracking view of the patient while coming to the destination. In the very critical position, doctors can reach the patient's destination as we know the life is very important.

Very interesting part of this application that in maximum daytime doctors are located centrally, and that is hospital, defiantly that is very important part of the role of the doctors in their duty, but in off-duty hours all the doctors are scattered in the city very widely, and they cover almost all the city but that time very less person knows the residence address or nearby Doctors available for their lives, BUT with the help of this application we channelised the doctors availability and interested doctors in registered categories will get the notification for MAKING AVAILABILITY OF THE DOCTORS IN REAL TIME. Lots of other facilities are therein doctors panel, that is what you can avail just after your registration.

Special features for Doctor:

1. Doctors will get the notification about the nearby patient or the patient who is directly associated.
2. Doctors having the facility to show availability during the time of the requirement so notification will only be forwarded to the available doctors.
3. Filtered notification will be forwarded as per the expertise of the doctor.
4. Government and private doctors will be available on the same portal so it will increase the available number of the doctors to the city for extending real time lifesaving mechanism.
5. Doctors can assist to the patient on call or visiting the patient. As notification will bear all the patient's detail.
6. Online appointments can be fixed by the patients.

Online medical report can be excess for better treatment and keeping record of the regular patient.

Blood Bank:

It is very important part of this application where the registered Blood bank will get the real-time notification of any sick person who is using this application. It matters a lot if any blood bank gets the advance notification of patient, it will help to reach blood on the immediate basis, and the patient will get the importance of every second what he is having. The blood bank will get the full tracking view of the patient while coming to the destination. In the very critical position blood, bank personnel can reach the patient's destination for the blood as we know the life is very important.

Very importantly it is the new and challenging aspect to convey the information about the available "BLOOD" in real time, for life-saving in real time.

The associate Blood Bank will have great "UNIQUE SELLING PROPOSITION" that they can extend the real-time life-saving assistance to all associated persons in the "CITY".

Special features for Blood Bank:

1. Easy to operate by the staff, web and mobile based application will help to update hourly basis information with unit and group wise of the blood.
2. They will get the notification in real time.
3. Hospitals can also communicate for the same as per the availability.
4. Donners campaign can be driven by the application.
5. Blood donation campaign can be promoted on the application and all the blood donors across the state PAN India will come on the same platform and detailed information about the collection of the blood will be available.
6. Digital card of the donner is integrated which will help donner to get the blood anywhere in state, and easy to keep.
7. Organisation those who are organising blood donation campaign can operate this application for maintaining detail digitally and promote their moto too.

Diagnostic Laboratory:

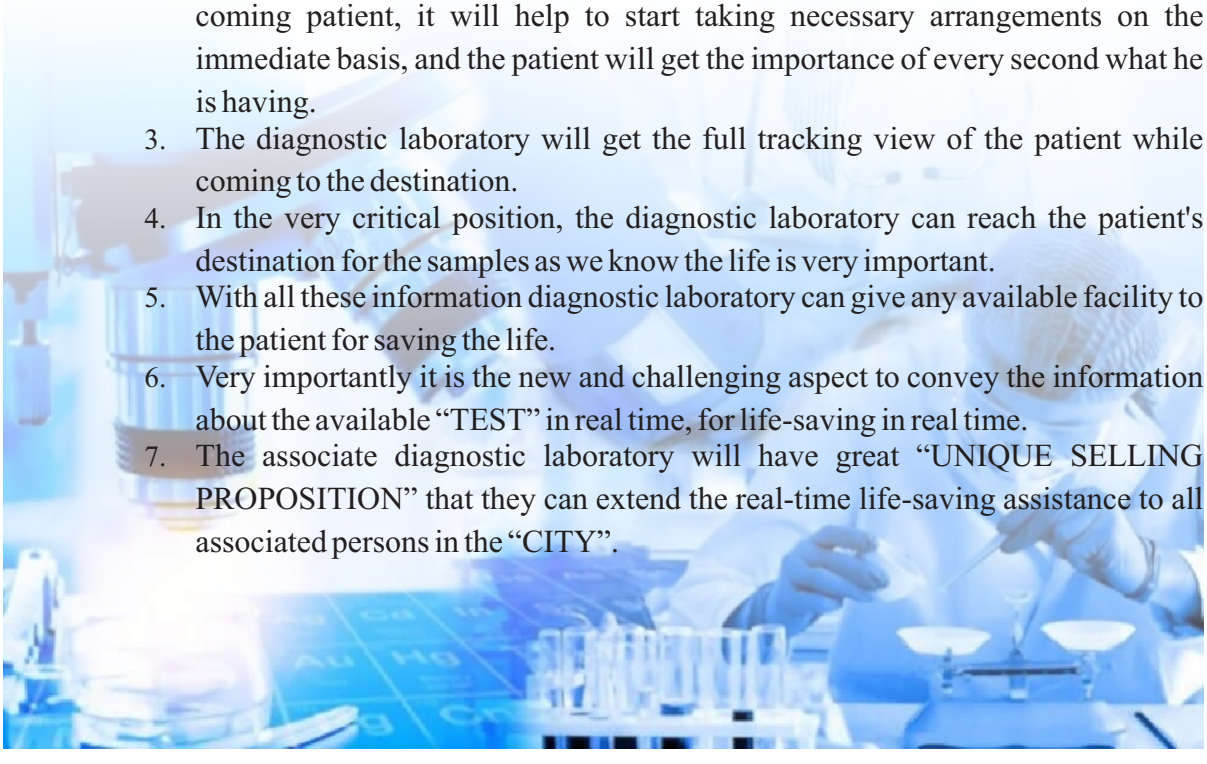

It is very important part of this application where the registered diagnostic laboratory will get the real-time notification of any sick person who is using this application. It matters a lot if any diagnostic laboratory gets the advance notification of coming patient, it will help to start taking necessary arrangements on the immediate basis, and the patient will get the importance of every second what he is having. The diagnostic laboratory will get the full tracking view of the patient while coming to the destination. In the very critica l position, the diagnostic laboratory can reach the patient's destination for the samples as we know the life is very important. With all this information diagnostic laboratory can give any available facility to the patient for saving the life.

Very importantly it is the new and challenging aspect to convey the information about the available "TEST" in real time, for life-saving in real time.

The associate diagnostic laboratory will have great "UNIQUE SELLING PROPOSITION" that they can extend the real-time life-saving assistance to all associated persons in the "CITY".

Special features for Diagnostic Lab:

1. It is very important part of this application where the registered diagnostic laboratory will get the real-time notification of any sick person who is using this application.
2. It matters a lot if any diagnostic laboratory gets the advance notification of coming patient, it will help to start taking necessary arrangements on the immediate basis, and the patient will get the importance of every second what he is having.
3. The diagnostic laboratory will get the full tracking view of the patient while coming to the destination.
4. In the very critical position, the diagnostic laboratory can reach the patient's destination for the samples as we know the life is very important.
5. With all these information diagnostic laboratory can give any available facility to the patient for saving the life.
6. Very importantly it is the new and challenging aspect to convey the information about the available "TEST" in real time, for life-saving in real time.
7. The associate diagnostic laboratory will have great "UNIQUE SELLING PROPOSITION" that they can extend the real-time life-saving assistance to all associated persons in the "CITY".

Medical Shop:

It is very important part of this application where the registered Medical Shop will get the real-time notification of any sick person who is using this application. It matters a lot if any medical Shop gets the advance notification of patient, it will help to reach medicine on the immediate basis, and the patient will get the importance of every second what he is having. Medical Shop will get the full tracking view of the patient while coming to the destination. In the very critical position, medical Shop personnel can reach the patient's destination for the medicines as we know the life is very important. With all these information medical Shop can give any available facility to the patient for saving the life.

Very importantly it is the new and challenging aspect to convey the information about the available "MEDICINE" in real time, for life-saving in real time.

The associate Medical Shop will have great "UNIQUE SELLING PROPOSITION" that they can extend the real-time life-saving assistance to all associated persons in the "CITY".

Special features for Medical Shop:

1. It is very important part of this application where the registered Medical Shop will get the real-time notification of any sick person who is using this application.
2. It matters a lot if any medical Shop gets the advance notification of patient, it will help to reach medicine on the immediate basis, and the patient will get the importance of every second what he is having.
3. Medical Shop will get the full tracking view of the patient while coming to the destination. In the very critical position, medical Shop personnel can reach the patient's destination for the medicines as we know the life is very important.
4. With all these information medical Shop can give any available facility to the patient for saving the life.
5. Very importantly it is the new and challenging aspect to convey the information about the available "MEDICINE" in real time, for life-saving in real time.
6. The associate Medical Shop will have great "UNIQUE SELLING PROPOSITION" that they can extend the real-time life-saving assistance to all associated persons in the "CITY".

Ambulance:

For life-saving, the role of the ambulance is very important. Because it is one of the available solutions for fast reach to the hospital. Reporting time is very high just because of the unavailability of the nearby ambulance and limited ambulance is integrated with GPS. To-and-fro movement of the ambulance is an important aspect of delay in treatment. Importantly we have integrated all available ambulance in the city which will increase the number of ambulances in the city as well as the presence of it will be increased in the different area across the city. As some small or single ambulances are not integrated with any GPS and not channelized, but this will be the great opportunity to both the segment for fast reach to the patient and treatment start time will be decreed like anything. As we are able to send the information about the patient, to the hospital who is travelling in an ambulance will greatly help to the patient. This is only possible with us "PRAN".

Special features for Ambulance:

1. This application is not only dedicated to single organisation of ambulance operator.
2. In city all available ambulance will be integrated on same platform and it will increase the availability of the ambulance in any city.
3. Application is integrated with the GPS and Realtime notification to the nearest available ambulance.

Station Police officer:

We have kept in mind that while any person is sick, that moment he may be alone. In that case, his mobilisation is important and with the concept of security we have developed a system where every user of this application will be tracked, and that information will be shared with local police station. That police station can track every person in his area, not only this SHO can investigate this anytime with all tracking record.

Out of the subject of this project, this application may help to user in the case of any kidnapping, miss guided by any third person, girls/ lady who is moving around alone and in need of help, etc. case may also get the real-time support in the case of registered users.

Special features for Station Police officer:

1. We have kept in mind that while any person is sick, that moment he may be alone.
2. In that case, his mobilisation is important and with the concept of security we have developed a system where every user of this application will be tracked, and that information will be shared with local police station.
3. That police station can track every person in his area, not only this SHO can investigate this anytime with all tracking record.
4. In accident case they will get the real time notification with GPS alert and police can reach in time at the location site.
5. Police can reach to the hospital in time to extend the legal services for starting the treatment in time.
6. At some extend it will help to reduce missing case or exchange cases of new born baby from the hospitals as we are extending the some technical assistance to the hospitals.

Nominated Relative:

This is again very important aspect that while any movement of any user of this application when he uses it for any support than in real time nominated person will get the real-time notification and that person can able to know or get all the information of all movement. With the help of this information, he can excess and extend support even after staying in the distance also.

Special features for Nominated Relative:

1. This is very important aspect that while any movement of any user of this application when he uses it for any support than in real time nominated person will get the real-time notification.
2. Nominated person can able to know or get all the information of all movement.
3. With the help of this information, he can excess and extend support even after staying far.

Our major concern is to generate a mechanism of real-time life-saving assistance. No mechanism of such kind has been developed yet. This vision is for one and all, for rural to urban, for places from north to south and east to west. To spread the awareness, we are heartily looking forward to the project affiliation with you because we wish to give helping hand to people stuck in the mishap by providing the assistance for quick aid and validate the concept of our project which is real-time life-saving assistance. An affiliation with bona fide interest will be a feather in the hat and grasp more people for the sake of life saving and connectedness with all. The alliance with us will be a great motivation for people in their territory to get them registered as Users or Ambutters and will break the hitch to work for others in a well-defined and secure manner as they will be assured about quick assistance from the entire scenario. This project will surely be adopted by people of our country with open hearts and will boost up the life-saving records at the quickest, ensuring victims are not deprived of urgent medical aid irrespective of time, place, money or a guarantee.

Medical Cover

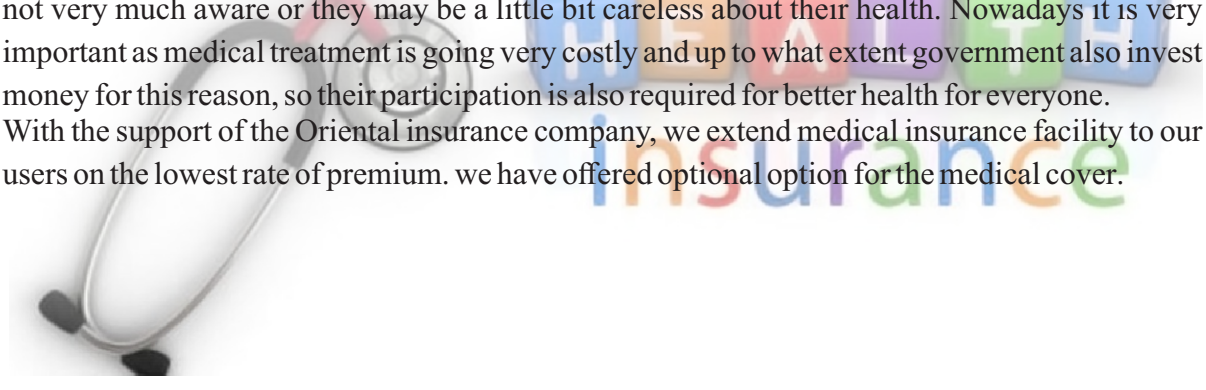

Buying a health insurance policy for yourself and your family is important because medical care is expensive, especially in the private sector. Hospitalisation can burn a hole in your pocket and derail your finances. It will become even tough, if the person who brings in the money, is now in a hospital bed. All this can be avoided by just paying a small annual premium which would lessen your stress in case of medical emergencies.

A good health insurance policy would usually cover expenses made towards doctor consultation fees, costs towards medical tests, ambulance charges, hospitalization costs and even post-hospitalization recovery costs to a certain extent.

Benefits of having a Health insurance Policy

1. **Cashless Treatment:** If you are insured, you can get cashless treatments as your insurance company would work in collaboration with various hospital networks.
2. **Pre and post hospitalization cost coverage:** Insurance policy also covers pre and post hospitalization charges up to the period of 60 days, depending on the insurance plans purchased.
3. **Transportation Charges:** Insurance policy also covers the amount paid to ambulance towards the transportation of insured.
4. **No Claim Bonus (NCB)**: This is the bonus element which is paid to the insured if the insured does not file a claim for any treatment in the previous year.
5. **Medical Checkup:** Insurance policy also provide options for health checkups. Free health checkup is also provided by some insurers based on your previous NCBs.
6. **Room Rent:** Insurance policy also covers room expenses depending on the premium being paid by the insured.
7. **Tax Benefit:** Premium paid on Health insurance is tax deductible under section 80D of the Income Tax Act.

We **PRANDHARIN TRUST** have extended this facility by keeping this mind that still in India 75% population is not under the cover of the Medical insurance. Maximum people are not very much aware or they may be a little bit careless about their health. Nowadays it is very important as medical treatment is going very costly and up to what extent government also invest money for this reason, so their participation is also required for better health for everyone.
With the support of the Oriental insurance company, we extend medical insurance facility to our users on the lowest rate of premium. we have offered optional option for the medical cover.

CORONA SPECIAL

A fight with Epidemic Situation (very rare but very important)

We all should know the fact of this epidemic situation. And present example has taught all of us that it is a war not just a treatment policy and given lesson that how we are supposed to be ready for this. Across the world still, there is no synchronisation of the medical chapters are available and they have no mechanism of internal communication in between all the medical chapters. But this epidemic situation alarms us that not only medical chapters are required to be channelized but administrative authorities are also required to be in it for mass control of the epidemics effect and threat in the society.

We Prandharin Trust working on this real-time life-saving mechanism from last two year and we come up with such a beautiful engineered product where everyone will remain safe. And any of the government can take the benefit of it and its synchronised system will increase the efficiency of the sentiment of the service to the people.

Very important aspect of this application is that it is not limited to any territory, it can be used across the world. As every one is moving for his / her work or for any reason to some place, with the support of This PRAN they feel secure enough.

Corona virus special:

Through the "**PRAN"** application, the users will be in touch with all synchronised channels of private and government medical chapters. With the support of this application, every citizen can approach the medical chapters and government agency also easily reach to the users of the city for keeping them in safe zone.

To cope up with the challenges of today's epidemic, all the establishments and Institutions have been closed, in such a situation this application will be more effective.

Special Features:

1. All information can be sent by the central government, state government and district level with the necessary information to each person with a different local language.
2. Since the above application is not limited to any one district, state, country, any person who is on the move, can be closely associated with various states, districts with the full collaborative process. It will help in better utilization of any information.
3. A facility has been made available at various government levels at the central level, at various levels in the state, at various government levels in the districts so that all information can be communicated at the **official level through this application.**
4. Notification alert will continue to be received by every person till they read each such notification.
5. At the government level also, the information will be available that how many people have received information or not.
6. In almost all the cities and villages of India, the use of smartphones as a whole is a large number, so that information can be transmitted socially to a large extent.
7. With the special button provided in case of Corona disease, the medical officer can come in contact with them immediately and the medical officer can take necessary measures immediately by information with the administration.
8. Information about available beds, doctors, test facilities for the corona of each hospital will be updated. The way facility of ICU update information has provided the facility of providing information about Corona reserved beds will be kept updated.
9. With the synchronisation of all governmental information at one platform will definitely help citizen drastically. They are not supposed to be panic to get the update of their own resident area along with their own state and region.

10. In coming time as per the use this application will become more mature and it will be more customised as per the need towards the fight of the epidemic situation.

Through this application, all attempts to reach out to everyone through various means will be successful. In times to come, the application will be very supportive of crisis Management for the government. In times of more complexity and one of your enhanced steps will only help in protecting citizens' groups.

Epidemic Situation:

Especially when epidemic like Corona has spread over the world. All type of efforts making towards the control of it. We also extended the special support and special integration of the technique. This application will ensure that every registered person who is using it has got the notification from any of the authorised levels. This application will ensure that the user has gone through with that notification or not. If the user has not read that particular notification then he will get the continues alert on this. It will help to monitor the person very specifically and categorically. User will be updated with each and every notification from the WHO, central government, State government, District level and it will reduce any rumour as any of the notification will be posted by the authorised person. With the synchronisation of all medical channels will also help to improve the coordination between available resources. This application will help to keep eyes on the whole city by interacting each and every citizen. The medial kiosk is also one of the extensions of such effort which can be the remote excess of this facility. We all can fight "CORONA" with these synchronised medical channels in an improved way and with all alertness.

Humble Request:

There is a humble request to you to support us for this effort what we are making to fight with epidemic health challenge to the nation. We have enclosed the letter of the line of action which is supposed to be taken at your level for the conveyance and fast reach to every citizen as we are running shortage of the time. We have uploaded all the correspondence with different level of the government for easy reference. It will make aware of all steps taken by us to the citizen as well to the authorities.

1. **WHO Notification Corner**: In this regard an official letter has been issued to the WHO, the necessary link to issue the notification, along with the login-password, has been communicated so that the WHO can access all its information directly to the public. Due to this process, there will be no panic in the public and they will be able to fight the conscious epidemic.
2. **Notification Corner sent by the Central Government:** An official letter has been issued to the Central Government in this regard, the necessary link for issuing the notification, along with login-password, was communicated so that the Central Government can access all its information directly to the public. Due to this process, there will be no panic in the public and they will be able to fight the conscious epidemic.
3. **Notification Corner sent by the State Government:** (Apart from the state in which the users of the application resides, user can also see other states notification too, it will be helpful at the time of travelling). An official letter has been issued to the state government in this regard, the necessary link for issuing the notification, along with login-password, was communicated so that the state Government can access all its information directly to the public. Due to this process, there will be no panic in the public and they will be able to fight the conscious epidemic.
4. **Notification Corner sent by the District authorities:** (Apart from the district in which the users of the application resides, user can also see other districts notification too, it will be helpful at the time of travelling). An official letter has been issued to the all-district authorities in this regard, the necessary link for issuing the notification, along with login-password, was communicated so that the district administration can access all its information directly to the public. Due to this process, there will be no panic in the public and they will be able to fight the conscious epidemic.

Humble Request:

Required support from Government of UTTAR PRADESH

1. A suggestive letter by the State Governments is required to be issued to all private / state **"HOSPITALS"** for joining the application. Which will be possible with just one notification. In this regard, the action is required to issue a letter to the level of district Chief Medical Officer. A letter has been issued to all the collectors. A copy of all those letters has also been made available to you.
2. A suggestive letter by the state governments is required to be issued to all private / state **"DOCTORS"** to join the application. Which will be possible with just one notification. In this regard, the action is required to issue a letter to the district level Chief Medical Officer. A letter has been issued to all the collectors from our end. A copy of all those letters has also been made available to you. To get the above proceedings done through the medium of IMA, a letter is also required to be issued to them from your medium.
3. A suggestive letter by the state governments is required to issue a letter to all private / state **"DIAGNOSTICS LABS"** linking to this application. Which will be possible with just one notification. In this regard, the action is required to issue a letter to the district level Chief Medical Officer. A letter has been issued to all the collectors from our end. A copy of all those letters has also been made available to you. To get the above action done through the association of the Diagnostics Labs Association, a letter is also required to be issued to them from your side.
4. A suggestive letter by the state governments is required to be issued to all private / state **"MEDICAL SHOP"** to join the application. Which will be possible with just one notification. In this regard, the action is required to issue a letter to the district level Chief Medical Officer. A letter has been issued to all the collectors from our end. A copy of all those letters has also been made available to you. To get the above action done through the association of the Medical shop Association, a letter is also required to be issued to them from your side.
5. A suggestive letter by the state governments is required to be issued to all private / state **"BLOOD BANK"** to join the application. Which will be possible with just one notification. In this regard, the action is required to issue a letter to the district level Chief Medical Officer. A letter has been issued to all the collectors from our end. A copy of all those letters has also been made available to you. To get the above action done through the association of the Blood Bank Association, a letter is also required to be issued to them from your side.
6. A suggestive letter by the state governments is required to be issued to all private / state **"AMBULANCE"** to join the application. Which will be possible with just one notification. In this regard, the action is required to issue a letter to the district level Chief Medical Officer. A letter has been issued to all the collectors from our end. A copy of all those letters has also been made available to you. To get the above action done through the association of the Ambulance Association, a letter is also required to be issued to them from your side.
7. A suggestive letter by the state governments is required to be issued to all state **"POLICE"** to join the application. Which will be possible with just one notification. In this regard, the action is required to issue a letter to the District Police Superintendent. A letter has been issued to all the collectors from our end. A copy of all those letters has also been made available to you. For getting register with us each thana has given login I'd and password.

Channelization of medical chapters is today's need we can only fight out with this worldwide epidemic situation through the channelization of all the medical chapters by involving every citizen of the nation. Out of any political mileage, this effort should reach for the interest of the nation to bring all citizens under the real-time safety umbrella. We definitely can't do more without your kind extension of supportive hands.

Health kiosks

This study found that health kiosks are promising, cost-effective and multifunctional tools; if included in the formal health system of countries, they may improve health indicators in countries. However, before deploying, their challenges and concerns need to be investigated and addressed.

The health kiosks play an important role in health care industry. They are touch screen computer-based terminals which are usually standing in public or specialized health areas. Unlike old versions of kiosks, opportunistic, the integrated kiosks are not just limited to providing information and consulting services but turning to hygienic, diagnostic and sometimes medical services. They make the provision of services and supply of medicines cheaper, faster, and easier, tailored to the client's time and desire.

Its benefits, the increased efficiency and cost-saving, increased accessibility, saving staff and patients' time, and reduced health-care weaknesses , improved patient safety , improved self-care and management of chronic diseases, reduced medication errors caused by the discrepancy between drug prescriptions, and identification and screening of new chronic diseases have been mentioned in various studies. They can also provide some health services in disasters.

On the other hand, there are some concerns about the use of health kiosks too. Device and data security and quality, privacy, service tariff, advertising protocol, and –most importantly- the inability to convey the emotions, hope, and convenience to patients need to be thought out; and the right solutions should be found.

Yet, this tool has not been included in some countries' formal health systems. The policymakers and investors require a comprehensive view of experiences in different countries to be justified to develop and deploy kiosks. The managers also need to know how to deliver services through kiosks, what will be the outcomes, what are benefits and challenges, etc.

The diversity of health kiosks and provided services, on the other hand, it has led to inconsistency in the findings of studies. For example, Chan et al. found that these kiosks are welcomed more at shopping centers, docks, walk-in centers, and “Kwik Save” supermarkets, while Jones et al. showed that they are more welcomed at specialized medical places ; Similarly, Eva et al. showed that the majority of kiosk users are women aged 30-50 years old, with postgraduate education and above, and with medium- upper income (75- 150 $), while Chan et al. believed that the gender, age, education level, race, neighborhood, and length of stay of users in the clinic waiting room did not significantly affect the effectiveness of kiosks .

Despite limited systematic studies in this area, the current highly changing environment, especially in the health technology industry, necessitates the periodical updating of information . Therefore, this study aimed to investigate all studies that had been conducted from 2001 to 2018 which revealed how the health kiosks are being used over the countries in order to provide a comprehensive vision and sufficient evidence about installing kiosks for health decision-makers in other countries.

PRANDHARIN TRUST is going to open health Kiosks at different levels of the state which includes

1. All the bus stops of the state,
2. Railway stations rural and urban areas,
3. At the District collectorate premises,
4. At the SDM headquarters
5. At the block levels.
6. All the villages
7. All the toll areas,
8. Densely populated areas,
9. local city bus stops,
10. universities,
11. colleges and
12. schools
13. Shopping malls.
14. Police lines
15. Parks area with Big locality /society /colonies
16. Any spot recommended by District health Officers and District magistrate

Our Expectation is to a lot

These kiosk operations will defiantly be going to support in real-time which will reduce the death ratio and help to get the fast delivery of the medical support.

Our expectation is to allot a marked area of a minimum of 8 x 15 sq ft in above mentioned locations. PRANDHARIN TRUST will never claim a right to own that place. Required to allot on lease or possible manner.

The kiosk will be supported by the nursing staff 24 X 7 and in the kiosk, there will be a facility of

1. Measuring temperature,
2. Measuring blood pressure
3. Blood sugar
4. Fat analysis
5. Blood oxygen
6. Blood uric acid
7. Blood cholesterol support
8. Urine test
9. SOS medicines
10. First aid
11. Population control measurements
12. Portable oxygen cylinder
13. Injury prevention services
14. Health self-management services of community-dwelling older adults
15. HPV testing
16. Mask
17. Regular generic medicines.
18. Oxygen Support System
19. Telemedicine support
20. Tele doctors Support with consultation
21. Heat way protection
22. Dehydration prevention measurements
23. Sanitary pads distribution
24. Asthmatic prevention measurements
25. Measuring height
26. Measuring weight scale
27. Visiting doctors for limited Hours
28. And many more …..

In our study, we observed that in all the mentioned locations there was not a single medical facility for instant delivery of the services. Health kiosks are allowed to deliver the services spontaneously and it will reduce the time to get medical help support, it will be a promising, cost-effective, and versatile way to enhance universal health coverage in all three dimensions: population coverage, financial protection and delivering services.
